As per instruction: Investigate Brown Co. Courthouse structure, in regards to the 2nd Floor - 3rd Floor weight bearing walls - joists - deck.

BJS obtained from Steve Ellis a set of original plans for observation & study. Created copies of pertinent areas of interest.

A filing system by tennisco, weighing approx 20,000 #s installed in the District Attorneys store room area was the reason for this investigation of weight bearing properties.

It was determined that the weight could be carried if the system by tennisco was turned 90° on axis, according to their drawings. The tracks holding the weight of the filing system could then be dispersed across the floor joist system evenly. The filing system tracks are situated over 16" TJI joists on 16" centers over the 2nd floor bathroom walls.

Total for this phase \$1266.²⁵

Thanks, Bill
